description

The SN75157 is a dual differential line receiver designed to meet EIA standards RS-422-A and RS-423-A and Federal Standards 1020 and 1030. It utilizes Schottky circuitry and has TTL-compatible outputs. The inputs are compatible with either a single-ended or a differential-line system. The device operates from a single 5-volt power supply and is supplied in an 8-pin dual-in-line package and small outline package.

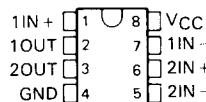

The SN55157 is characterized over the full military temperature range of -55°C to 125°C . The SN75157 is characterized for operation from 0°C to 70°C .

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)

NOTES: 1. All voltage values, except differential input voltage, are with respect to the network ground terminal.
 2. Differential input voltage is measured at the noninverting input with respect to the corresponding inverting input.
 3. For operation above 25°C free-air temperature, derate the SN55157 JG package to 672 mW at 70°C at the rate of 8.4 mW/°C,
 the SN75157 JG package to 528 mW at 70°C at the rate of 6.6 mW/°C, the D package to 464 mW at 70°C at the rate
 of 5.8 mW/°C, and the P package to 640 mW at 70°C at the rate of 8.0 mW/°C. In the JG package, SN55157 chips are
 alloy mounted and SN75157 chips are glass mounted.

I _{CC} Supply current	V _{ID} = -0.5 V,	No load		35	50		mA

[†]All typical values are at V_{CC} = 5 V, T_A = 25°C.

[†]Only one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTES: 4. The algebraic convention, where the less-positive (more-negative) limit is designated as minimum, is used in this data sheet for threshold levels only.

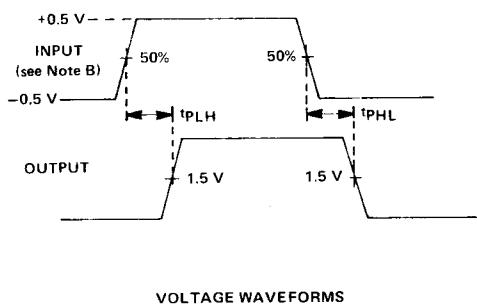

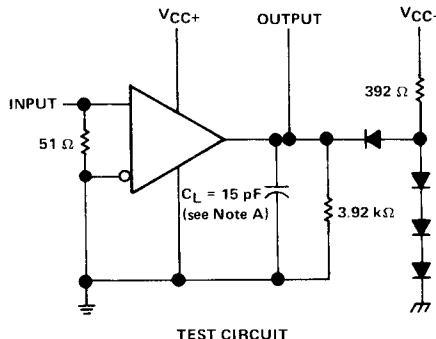

5. The expanded threshold parameter is tested with a $500\text{-}\Omega$ resistor in series with each input.
 6. The input not under test is grounded.
