

SN54HC386, SN74HC386 QUADRUPLE 2-INPUT EXCLUSIVE-OR GATES

D2684, DECEMBER 1982—REVISED SEPTEMBER 1987

- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

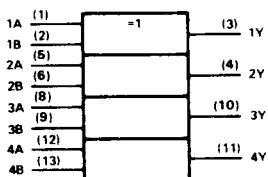

description

These devices contain four independent 2-input Exclusive-OR gates. They perform the Boolean functions $Y = A \oplus B = \overline{AB} + \overline{A}\overline{B}$ in positive logic.

A common application is as a true/complement element. If one of the inputs is low, the other input will be reproduced in true form at the output. If one of the inputs is high, the signal on the other input will be reproduced inverted at the output.

The SN54HC386 is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74HC386 is characterized for operation from -40°C to 85°C .

logic symbol[†]

[†]This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

Pin numbers shown are for D, J, and N packages.

absolute maximum ratings over operating free-air temperature range[†]

Supply voltage, V_{CC}	$-0.5\text{ V to }7\text{ V}$
Input clamp current, I_{IK} ($V_I < 0$ or $V_I > V_{CC}$)	$\pm 20\text{ mA}$
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)	$\pm 20\text{ mA}$
Continuous output current, I_O ($V_O = 0$ to V_{CC})	$\pm 25\text{ mA}$
Continuous current through V_{CC} or GND pins	$\pm 50\text{ mA}$
Lead temperature 1.6 mm (1/16 in) from case for 60 s: FK or J package	300°C
Lead temperature 1.6 mm (1/16 in) from case for 10 s: D or N package	260°C
Storage temperature range	$-65^{\circ}\text{C to }150^{\circ}\text{C}$

[†]Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
