

# SN54ALS251, SN54AS251, SN74ALS251, SN74AS251 1-OF-8 DATA SELECTORS/MULTIPLEXERS WITH 3-STATE OUTPUTS

D2661, APRIL 1982—REVISED MAY 1982

- Three-State Versions of 'ALS151 and 'AS151
- Three-State Outputs Interface Directly with System Bus
- Performs Parallel-to-Serial Conversion
- Complementary Outputs Provide True and Inverted Data
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

### description

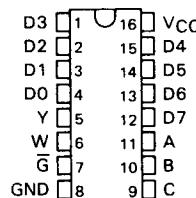

These data selectors/multiplexers contain full binary decoding to select one-of-eight data sources and feature strobe-controlled complementary three-state outputs.

The three-state outputs can interface with and drive data lines of bus-organized systems. With all but one of the common outputs disabled (at a high-impedance state), the low-impedance of the signal enabled output will drive the bus line to a high or low logic level. Both outputs are controlled by the strobe ( $\bar{G}$ ). The outputs are disabled when  $\bar{G}$  is high.

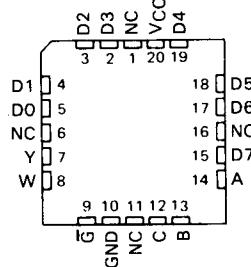

The SN54ALS251 and SN54AS251 are characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74ALS251 and SN74AS251 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .
